

IN THE ABSTRACT OF THE DISCLOSURE:

Please amend the Abstract as follows:

--A process cartridge detachably attachable to a main body of an electrophotographic image forming apparatus includes an electrophotographic ~~sensitive~~ photosensitive drum, a drum; a developing roller ~~for developing an electrostatic latent image formed on the drum, a movable electrophotographic sensitive drum~~; a drum shutter ~~movable between a protecting position for protecting the electrophotographic photosensitive drum, a~~ and a retracting position for retracting from the protecting position; a first frame body ~~for rotatably supporting the drum, a electrophotographic sensitive drum~~; a second frame body ~~for~~ swingably coupled to the first frame body and rotatably supporting the developing roller, ~~an the second frame body being swingably coupled to the first frame body~~; an optical path provided between the first frame body and the second frame body for passing light from the main body to which the electrophotographic sensitive drum, and is exposed, the light being irradiated from the main body of the electrophotographic image forming apparatus; and supporting portions ~~for swingably supporting the drum shutter provided on one end and on the other end in the longitudinal direction of the first frame body, the supporting portions being disposed between the first frame body and the second frame body and on the outside of the optical path in the longitudinal direction.~~--
